

UAV-500

Fuel Measurement System

Now With New Low Flow Rates

UAV-500 is a new concept in UAV fuel management:

- Insight's NEW UAV-500 Fuel Measurement System with low flow rate.
- UAV-500 is designed to give UAV operator a simple and efficient way of reading fuel information directly on your display.
- UAV-500 eliminates tedious installation and set-up procedures that are required for other fuel flow computers.
- UAV-500 computes fuel flow rate, total fuel used and transmits data through a serial interface.
- First fuel flow computer that does not use up valuable panel space.
- First fuel flow computer fully installed in the engine compartment. (no additional equipment required, works directly with the GPS)
- First fuel flow computer to eliminate "ground problems" (common-mode voltages superimposed on the ground wire that reduces SNR of the fuel flow computer)
- Simple and short installation reduces installation cost to a fraction of what is typical for other fuel flow computers.
